EBV	A brief explanation
Eight Week Weight	The breeding potential for lamb growth rates from birth to 8 weeks of age
Mature Size	Choosing animals with high figures for this trait will increase mature size
Litter Size	Selection of high EBVs will increase the prolificacy of female replacements
Maternal Ability	This is the maternal component of the 8 week measurement. The higher this figure the better a ram's ewe lambs will perform as mothers (i.e milking ability)
Scan Weight	The breeding potential for lamb growth rates to 21 weeks (age at scanning). The selection of breeding stock with high scan weight EBVs will result in animals with heavier carcasses at a constant fat class or leaner carcasses at a constant age
Muscle Depth	Choosing animals with high muscle depth EBVs will increase lamb muscularity and hence the lean meat content of the carcase
Fat Depth	Negative values indicate animals with lower fat content which will produce leaner carcasses or which can be taken to higher weights without becoming over-fat
Lean Weight	Breeding value predicting yield of lean meat in the carcase (EBV only produced for breeds involved in CT scanning)
Fat weight	Breeding value predicting yield of fat in the carcase (EBV only produced for breeds involved in CT scanning)
Gigot	Breeding value highlighting animals with superior breeding potential for gigot shape (EBV only produced for breeds involved in CT scanning)
FEC	Breeding potential for worm resistance, a negative number being preferable (EBV only produced for breeds involved in FEC sampling)
Index	Highlights superior breeding stock for a specific breeding objective

PERFORMANCE MULES

Welcome to the Bluefaced Leicesters breeding and marketing initiative of Mules sired by performance recorded Bluefaced Leicesters in the top 50% of the breed. As we are aware there is an increasing demand for a scientific approach in many areas of agriculture and sheep farming is no different.

Our aim is to provide the sheep industry with high performing, profitable ewes which benefit from the maximum amount of hybrid vigour. It has been proven that the benefits of hybrid vigour are at their highest when two breeds are used and that it decreases as more breeds are added to the mix. The crossing of the Bluefaced Leicester with any pure hill breed is a proven method of maximising the benefits of hybrid vigour, producing mules for professional farm managers and shepherds. We now want to work with Mule breeders to develop and identify Performance Mules .

In 2015 Mule breeders will be able to market their female Mules as ‘Performance Mules’ if they meet a few simple qualifying criteria. The Mule Societies in the UK have all been approached and in 2015 the Welsh Mule Society will be the first group of breeders to take up this initiative and offer Performance Mules at their association sales

How to qualify as a Performance Mule

Mule breeders will need to work with the Bluefaced Leicester Association and their Mule society to formally identify Mules sired by above average index Performance recorded Bluefaced Leicesters.

- 1) All Mules in any one pen must be sired by a Bluefaced Leicester with an index in the top 50% on the year of purchase, according to Signet performance recorded data. This data is also available on the BASCO website.
- 2) Each Mule breeder can contact the Bluefaced Leicester Association for a certificate which highlights the identity of the Qualifying Ram or rams used. These certificates can be displayed on the pens at the Mule sales.
- 3) All Performance Mules will be identified by the initials ‘PM’ on their ear tags in a similar way as the Bluefaced Leicesters use the initial ‘L’. Please contact your tag supplier to produce appropriate tags for 2015 born Performance Mules.

The Mule societies and Bluefaced Leicester Association will continue to work together as this initiative develops. Please contact the Association office should you require Certificates for your Qualifying rams.
